

API Communicaton [Tracking Information]

Execute a POST or GET to the following URL: <http://yourcompany.cargotrack.net/appl2.0/auto/api.asp>, "yourcompany.cargotrack.net" must be replaced by your system's URL address.

Nombre variable	Descripción
api_key	Alphanumeric of 10 digits that we will provided to identify you as a valid source
api_action	track
class	To determine what we want to query: tracking : query by tracking on courier shipments order : query by house number warehouse : query by warehouse number
reference	Tracking number, order number or warehouse number

Once processed a XML file could be retrieved with the tracking events for that tracking number. This file will contain the following sections.

```
<xml>  
<shipment>  
<event>
```

Tag Name	Description
ref	integer number to identify each event
date	Date and time of the event YYYY-MM-DD HH:MM
code	Code assigned to this event
description	Explanation of the event
pod	Name of the person signing reception of the shipment. This tag will only be populated on "delivered" event.

```
</event>  
</shipment>  
</xml>
```
